

SALL1 Peptide

SALL1 Peptide

CATALOG NO.: 46-332P

LOCATION: 13 amino acids of SALL1.

ACCESSION NUMBER(S): NP_002959.2

PREPARATION: SALL1 peptide is supplied as 100µg of dried peptide. When the peptide is reconstituted in 200µl water, the concentration will be 0.5mg/ml.

STORAGE: Store at -20°C. Minimize freezing and thawing.

APPLICATION: SALL1 peptide is used for blocking the activity of SALL1 antibody (catalog number 46-332). The SALL1 antibody ships at 0.5mg/ml and the SALL1 peptide ships as a 100µl pellet. When peptide is reconstituted in 200µl water, the concentration will be 0.5mg/ml, identical to that of the antibody. The best starting ratio would be 1:1 (which means molar excess of peptide relative to antibody when identical volumes are mixed). Mix equal volume of peptide and antibody at the required dilution and leave at ambient temperature for 20 minutes. Then incubate and develop in parallel two blots: one with the antibody and one with the antibody which has been pre-absorbed with the provided peptide.

USER NOTES: When working with peptides and antibodies, optimal dilutions and concentrations should be determined by the end user for each application. The information is provided as a guideline only. As with all ProSci peptides and antibodies, this peptide is **for research use only**.
