

Breast Tissue Slide (Ductal Carcinoma In Situ (DCIS))

Cat. No.: 10-010

Ψ Specifications

SPECIES:	Human
TESTED APPLICATIONS:	IHC
APPLICATIONS:	<p>ProSci's human tissue slides can be used with any antibody shown to be effective in formalin-fixed tissue using a standard immunostaining protocol.</p> <p>In order to avoid false negative results from DNA or RNA sequences not being present in a 4 μm cellular cross-section, 10 μm tissue sections are recommended. 10 μm single tissue slides are available upon request. This product has not been evaluated for effectiveness in ISH or FISH applications.</p>

STORAGE CONDITIONS: Stable for up to two years when stored in a cool, dry lab area.

Ψ Background and References

BACKGROUND:	<p>Please Note: ProSci now has over 700 different lots available for a wide range of tissues. Many of these lots are not listed online. If you don't see what you are looking for please call us.</p> <p>Formalin-fixed, paraffin-embedded tissue is useful for a variety of applications including the targeting of proteins, RNA, and DNA by means of Immunohistochemistry (IHC), in-situ hybridization (ISH) and fluorescence in-situ hybridization (FISH), respectively. Some tissue types may require extra attention as they may contain high levels of endogenous biotin, peroxidase, or autofluorescence.</p>
