

CTLA 4 Recombinant Protein

Cat. No.: 96-215

The purity of Cynomolgus CTLA4 /CD152 was determined by DTT-reduced (+) SDS-PAGE and staining overnight with Coomassie Blue.

Ψ Specifications

SPECIES:	Cynomolgus monkey
SOURCE SPECIES:	HEK293 cells
SEQUENCE:	biotinylated form of Recombinant Protein L
FUSION TAG:	His Tag
TESTED APPLICATIONS:	WB
APPLICATIONS:	This recombinant protein can be used for WB. For research use only.
PREDICTED MOLECULAR WEIGHT:	14.1 kDa

Ψ Properties

PURITY:	>95% as determined by SDS-PAGE.
PHYSICAL STATE:	Lyophilized
BUFFER:	PBS, pH7.4
STORAGE CONDITIONS:	Lyophilized Protein should be stored at -20 °C or lower for long term storage. Upon reconstitution, working aliquots should be stored at -20 °C or -70 °C. Avoid repeated freeze-thaw cycles.

OFFICIAL SYMBOL:	CTLA4
ALTERNATE NAMES:	CTLA4, CD152, CELIAC3, GRD4, GSE, ICOS, IDDM12
ACCESSION NO.:	Q9BDC4
GENE ID:	705673

 Background and References

BACKGROUND:	<p>CTLA-4 (Cytotoxic T-Lymphocyte Antigen 4) is also known as CD152 (Cluster of differentiation 152), is a protein receptor that downregulates the immune system. CTLA4 is a member of the immunoglobulin superfamily, which is expressed on the surface of Helper T cells and transmits an inhibitory signal to T cells. The protein contains an extracellular V domain, a transmembrane domain, and a cytoplasmic tail. Alternate splice variants, encoding different isoforms. CTLA4 is similar to the T-cell co-stimulatory protein, CD28, and both molecules bind to CD80 and CD86, also called B7-1 and B7-2 respectively, on antigen-presenting cells. CTLA4 transmits an inhibitory signal to T cells, whereas CD28 transmits a stimulatory signal. Intracellular CTLA4 is also found in regulatory T cells and may be important to their function. Fusion proteins of CTLA4 and antibodies (CTLA4-Ig) have been used in clinical trials for rheumatoid arthritis.</p>
