

SARS-CoV-2 (COVID-19) Nucleocapsid Mosaic Recombinant protein

Cat. No.: 39-115

Ψ Specifications

SPECIES:	SARS-CoV-2
SOURCE SPECIES:	E. coli
SEQUENCE:	The E.Coli derived recombinant protein contains the Coronavirus 2019 full length nucleocapsid Mosaic immunodominant regions [full length N-antigen], fused to 6xHis tag at C-terminal.
FUSION TAG:	His Tag

Ψ Properties

PURITY:	>90% pure as determined SDS-PAGE.
PHYSICAL STATE:	Liquid
BUFFER:	CoV 2019 Nucleocapsid-Mosaic Protein solution is supplied in 1x PBS.
STORAGE CONDITIONS:	Store in working aliquots at -20 °C. Avoid freeze/thaw cycles.

Ψ Background and References

BACKGROUND:

A human infecting coronavirus (viral pneumonia) called 2019 novel coronavirus, 2019-nCoV was found in the fish market at the city of Wuhan, Hubei province of China on December 2019. The 2019-nCoV shares an 87% identity to the 2 bat-derived severe acute respiratory syndrome 2018 SARS-CoV-2 located in Zhoushan of eastern China. 2019-nCoV has an analogous receptor-BD-structure to that of 2018 SARS-CoV, even though there is a.a. diversity so thus the 2019-nCoV might bind to ACE2 receptor protein (angiotensin-converting enzyme 2) in humans. While bats are possibly the host of 2019-nCoV, researchers suspect that animal from the ocean sold at the seafood market was an intermediate host. RSCU analysis proposes that the 2019-nCoV is a recombinant within the viral spike glycoprotein between the bat coronavirus and an unknown coronavirus.
