Colorectal Tissue Slide (Adenocarcinoma)

CATALOG NUMBER: 10-704

Specifications

TISSUE CELL TYPE:	Colorectal
SPECIES:	Human
GENERAL DIAGNOSIS:	Colorectal Tissue Slide (Adenocarcinoma)
AVAILABLE LOTS:	Lots XA1, XB1, XC1, XD1, XE1, XF1, XG1, XH1, XJ1, YA1, YB1, YC1, YD1, YE1, YF1, YG1, YH1, YJ1, YK1, YL1 - Colorectal – Adenocarcinoma Lots XK1, XL1, XM1, XN1, XQ1, YQ1, YV1, YX1 - Colorectal - Rectum - Adenocarcinoma Lots XP1, XR1, YM1, YN1, YP1, YR1, YS1, YT1, YU1, YW1 - Colorectal - Colon - Adenocarcinoma
TESTED APPLICATIONS:	IHC
APPLICATIONS:	ProSci's human tissue slides can be used with any antibody shown to be effective in formalin-fixed tissue using a standard immunostaining protocol. In order to avoid false negative results from DNA or RNA sequences not being present in a 4 um cellular cross-section, 10 um tissue sections are recommended. 10 um single tissue slides are available upon request. This product has not been evaluated for effectiveness in ISH or FISH applications.

Properties

FIXATION:	Formalin-fixed, paraffin-embedded
STORAGE CONDITIONS:	Stable for up to two years when stored in a cool, dry lab area.

Background

Please Note: ProSci now has over 700 different lots available for a wide range of tissues. Many of these lots are not listed online. If you don't see what you are looking for please call us.

Formalin-fixed, paraffin-embedded tissue is useful for a variety of applications including the targeting of proteins, RNA, and DNA by means of Immunohistochemistry (IHC), in-situ hybridization (ISH) and fluorescence in-situ hybridization (FISH), respectively. Some tissue types may require extra attention as they may contain high levels of endogenous biotin, peroxidase, or autofluorescence.

Please note: Slides shipped for your order will not be stained and are prepared for each individual order to insure quality. A 3-4 day lead time is required.
