

SARS-CoV-2 Open Reading Frames (ORFs)

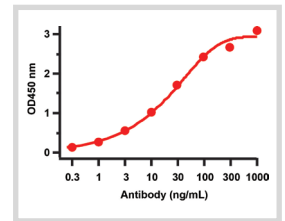

The SARS-CoV-2 virus which causes COVID-19 is comprised of 10 open reading frames (ORFs). Many of these create structural proteins and nonstructural proteins, but several of them generate unique proteins named after the ORF they are encoded by. Inhibiting some of these SARS-CoV-2 proteins which contribute to viral immune evasion could lead to faster clearing of SARS-CoV-2 infection by improving the host's antiviral systems. ProSci's catalog has antibodies and recombinant proteins to many of the SARS-CoV-2 ORF accessory proteins.
